

Results for Historic trajectories:

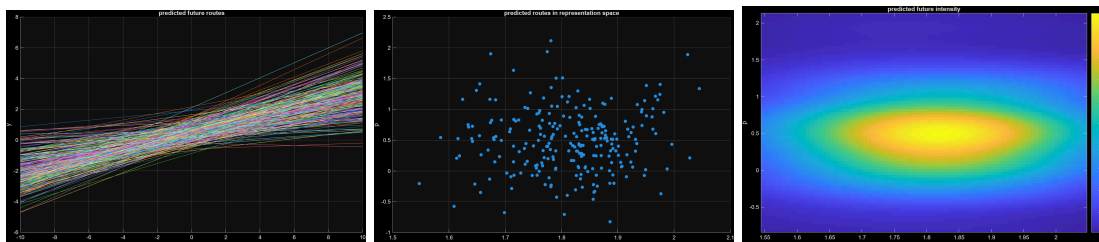

From left: 1. historical (dummy) trajectories 2. dummy routes in representation space 3. detection probability for one test sensor.

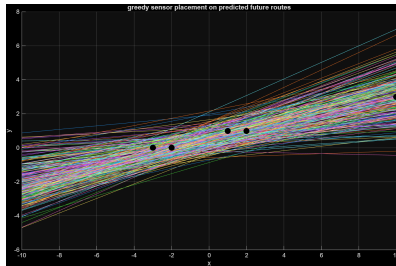

From left: 1. historical intensity map 2. sensor placement after greedy search.

Result for Predicted trajectories:

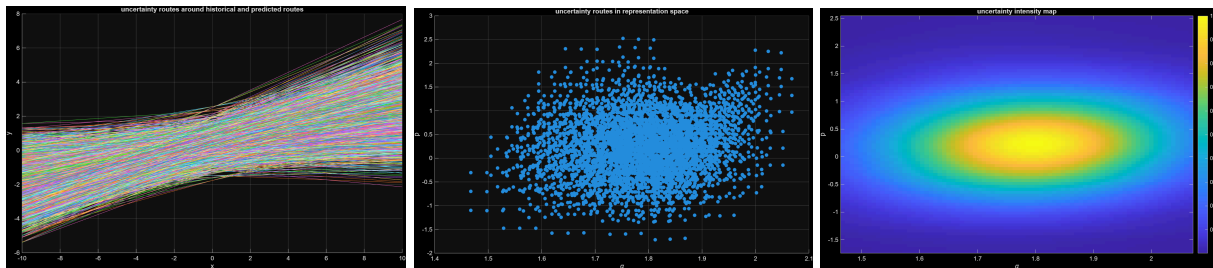

From left: 1. predicted future trajectories 2. predicted routes in representation space 3. predicted intensity map.

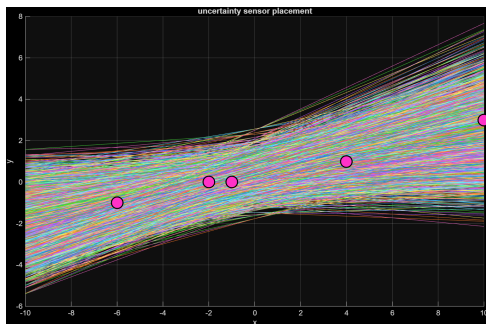

sensor placement after greedy search.

Historical+Prediction>Uncertainty Results:

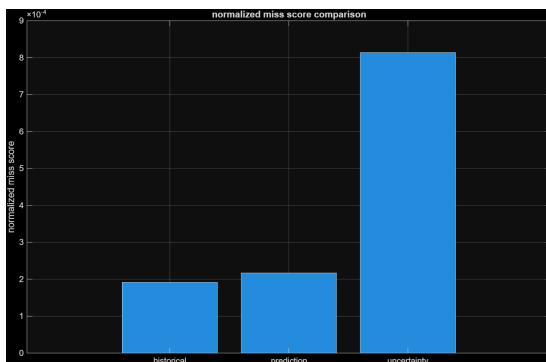

From left: 1. “historical+predicted” trajectories 2. “historical+predicted” routes in representation space 3. “historical+predicted” intensity map.

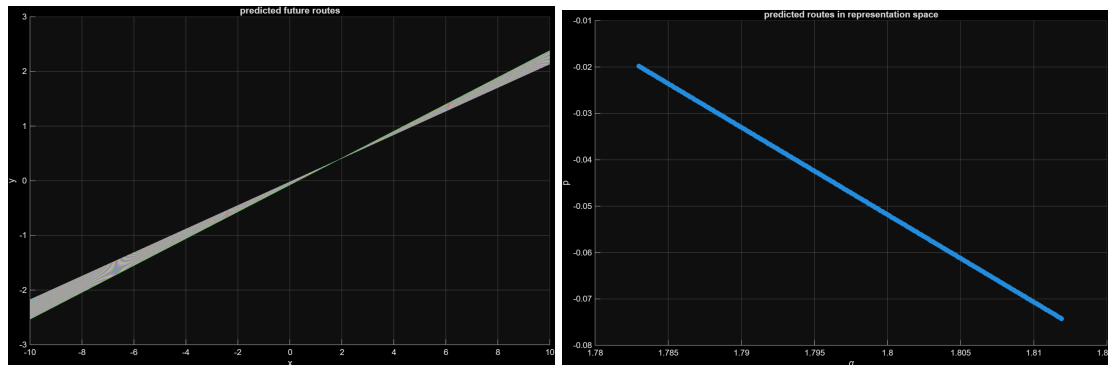

“historical+predicted>uncertainty” sensor placement after greedy search.

Normalized missed score comparison:

normalized missed score comparison

Linear Regression prediction with the same data input as historical data

From left: 1. predicted future routes 2. predicted routes in representation space.
Linear regression model was tested but is not used in the prediction because it produced a narrow and hard-to-interpret pattern.
